Oroville Dam Auxiliary Spillway Incident

On 03/27/17 the California State Warning Center (CSWC) the California Department of Water Resources (DWR) advises that today at 1200 hours they will begin gradually ramping down outflow from the Oroville Reservoir.

- Flow from the flood control spillway will be reduced from 40,000 cubic feet per second to zero.
- As flows are reduced, DWR will monitor the status of the dam, spillways, and related structures to ensure their continued safety and stability.
- Flow to the Feather River will be reduced gradually to minimize risk to downstream levees per the Army Corps of Engineers operational requirements.
- This flow reduction in the river will be buffered by the Hyatt Powerplant, Diversion Pool, Thermalito Forebay, and the Thermalito Afterbay over the course of 2 days, to a final flow of 13,000 cubic feet per second.

Per the DWR Flood Operations Center and California Data Exchange Center (CDEC) as of 03/27/17 at 1800 hours:

- Inflow: 31,753 cfs.
- Outflow: 11,207 cfs.
- The current lake elevation is 836.50 feet.

WEATHER OF CONCERN

Weather of Concern

- Gusty northerly winds are expected to impact portions of Southwest California through Tuesday.
 - The strongest winds, with damaging gusts to 65 mph, will affect the Antelope Valley, and the mountains of Los Angeles, Ventura and Santa Barbara Counties.
 - Elsewhere over southwestern California, gusty winds of 40 to 50 mph can be expected along the Central Coast, and much of the coast and valleys of Ventura and Los Angeles Counties.
 - Winds are expected to turn northeasterly and remain gusty Tuesday morning into Tuesday afternoon.
- **Active Weather Warnings, Watches and Advisories by County:**
http://www.wrh.noaa.gov/sto/brief/www_bc_cal.php - Temporarily unavailable. NWS is in the process of repairing the page.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

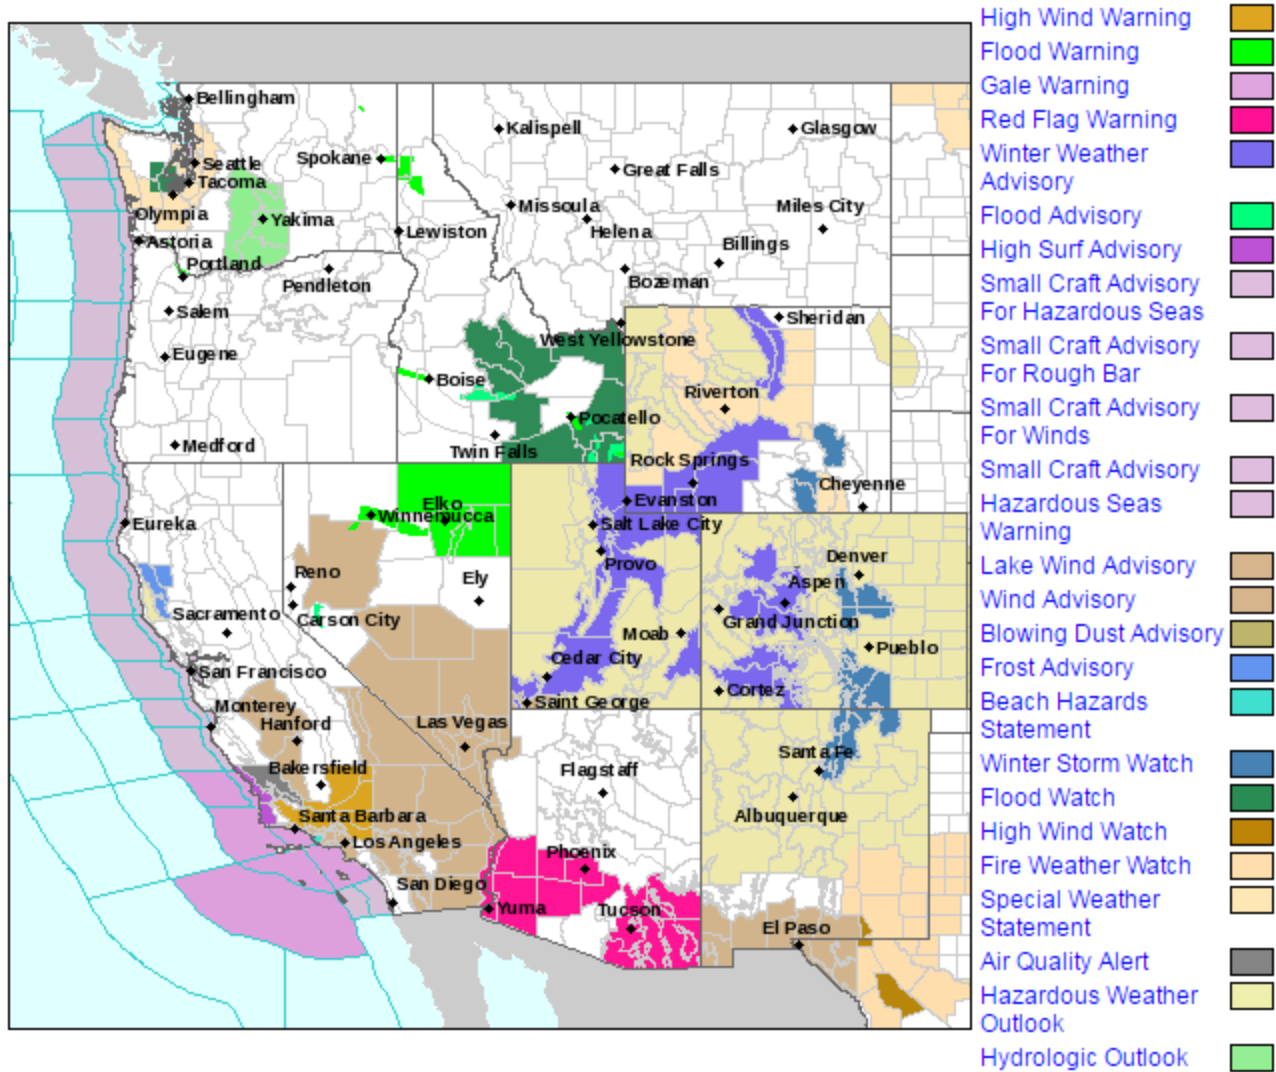

The remnants of one system will be lingering over the region today with at least morning showers over the northern and eastern mountains in particular and dry weather with variable amounts of cloudiness for most other locations. Much warmer and partly cloudy to sunny skies will prevail Tuesday as higher pressure moves over the region. Yet another weather system will move into the region from the northwest off the Pacific Wednesday and spread relatively light precipitation across the northern half of the region. That system will continue to bring precipitation to the northern and eastern areas Thursday. High pressure arrives Friday that will linger well into the weekend, but that may give way to the approach of a low pressure trough Sunday. It is uncertain at this time whether that system will bring some rain back to the far northern areas by the end of the weekend or not. Gusty westerly winds can be expected in some areas today. Areas of gusty northerly winds will develop Tuesday, mainly in the Sacramento Valley and surrounding foothills. The next significant wind event will be late this week when quite strong, gusty north to northeast winds develop late Thursday and last into early Saturday as the mentioned high pressure pattern strengthens over the region. The lowest snow levels this week will again be around 4000 feet in the north to around 6000 feet in the south for today and again late Wednesday night into Thursday morning. Afternoon high temperatures will be on a typical early spring roller coaster this week. The warmest inland valleys will spend much of the next 7 days in the low and mid 70s after today. The warmest day coming up should be Saturday with upper 70s to low 80s possible in the warmest spots.

SOUTHERN CALIFORNIA

The back side of a Pacific trough will bring west to northwest winds of 20 to 40 mph with gusts to 60 mph to the wind prone mountain and desert areas through this afternoon. These winds will become northerly with the same speeds this evening through Tuesday morning and become focused across the mountains southward from Santa Barbara County to Los Angeles County. Strong northerly winds will also occur across the Owens Valley and near the Colorado River. Isolated showers will fall over the mountains through this afternoon. The snow level will be around 6,000 feet. Temperatures will be near normal today, with mid 40s to mid 50s across the mountains and 60s to low 70s in the valleys. A ridge of high pressure will build into California from the Pacific Ocean bringing significant warming and drying to the region Tuesday and Wednesday. Temperatures will be 10 to 20 degrees above normal by Wednesday, with the warmest valley locations of Southern California approaching 90 degrees. Another trough will move inland into the Pacific northwest and then into the Great Basin bringing much cooler temperatures to the area along with strong west to north winds across the mountains and deserts Thursday and Friday. This trough will be followed by a ridge of high pressure building inland from the Pacific this weekend bringing similar weather conditions to Tuesday and Wednesday.
